

UW-Madison Police Department

Policy: 61.2

SUBJECT: TRAFFIC COLLISION INVESTIGATION

EFFECTIVE DATE: 06/01/10

REVISED DATE: 12/31/11, 11/01/13; 08/21/19; 12/09/20; 10/20/21; 03/06/24

REVIEWED DATE: 04/04/14; 08/01/17; 08/24/18; 09/12/22; 09/14/23; 09/13/24

STANDARD: CALEA 61.2.1 – 61.2.2

INDEX:

61.2.1.1 TRAFFIC COLLISION INVESTIGATION AND REPORTING POLICIES

61.2.1.2 TRAFFIC COLLISIONS INVOLVING DEPARTMENT VEHICLES

61.2.2 TRAFFIC COLLISION TYPES REQUIRING OFFICER RESPONSE

61.2.3 TRAFFIC COLLISION SCENE RESPONSIBILITIES

61.2.4 TRAFFIC COLLISION INVESTIGATION FOLLOW-UP

POLICY:

The UW-Madison Police Department shall establish guidelines and procedures for reporting an investigation of traffic collisions. Agency activities connected with, or related to traffic collisions include providing emergency assistance to the injured, protecting the collision scene, conducting on-scene and follow-up investigations, preparing reports, and taking proper enforcement actions relative to the incident.

DEFINITIONS:

“Traffic collision investigation” refers to collection of factual information which includes identifying and describing persons, roads, and vehicles involved in a collision; describing the results of the collision in terms of damage to vehicles and roadside objects, injury to people, marks and residue on the roadway, and final positions of the vehicles and bodies; interpretation of these facts in terms of behavior of road users involved; and sometimes, an attempt to specify the particular combination of factors required to produce that collision.

“Traffic collision reporting” refers to basic data collection to identify and classify a traffic collision and the persons, vehicles, times/location, planned movements involved, and possible contributing factors, such as traffic law violations.

PROCEDURE:

61.2.1.1 TRAFFIC COLLISION INVESTIGATION AND REPORTING POLICIES

- A. Officers responding to and investigating any traffic collisions that meet the state’s requirement for reporting and occur within the agency’s jurisdiction shall complete the Standard Wisconsin Motor Vehicle Accident Report DT4000 form. If it is determined the collision does not meet the state’s requirement for reporting, the traffic collision shall be documented at minimum via a call for service, to include identifying information of involved parties and vehicles.
- B. Officers shall conduct an on-scene investigation of all traffic collisions involving the following:
 - 1. Death or injury
 - 2. Property damage meeting or exceeding the state specified requirement for reporting
 - 3. Hit and run
 - 4. Impairment due to alcohol and/or drugs
 - 5. Hazardous materials
 - 6. Occurrences on UW-Madison property areas
- C. In cases of collisions involving death or serious injury or hazardous materials release, more than one patrol officer shall be assigned to respond.
- D. Officers completing the DT4000 reportable form shall issue all parties in the crash the agency case or event ID number for later reference.
- E. Officers investigating the traffic crash shall complete the standard Wisconsin Motor Vehicle Accident Report (DT4000) in accordance with department directive 82.2 Field Reporting and Management.

61.2.1.2 TRAFFIC COLLISIONS INVOLVING DEPARTMENT VEHICLES

- A. Traffic collisions occurring on campus shall be investigated by the shift police OIC or designee. If the accident involves serious injury or death, an outside agency shall be requested to investigate. In the event a critical incident occurs as a result of a traffic collision, department directive 1.5 shall be implemented and followed.
- B. Traffic collisions occurring off campus shall be reported for investigation to the agency having jurisdiction.
- C. In the event of a traffic collision involving Department vehicles or personnel investigated by other agencies, a police supervisor or OIC, if practical, shall go to the scene and/or follow up with involved personnel.
- D. The supervisor or OIC shall request a copy of the incident report from the investigating agency.
- E. The employee involved in an accident, regardless of location, shall submit Incident and Risk Management reports describing the facts and circumstances surrounding the accident before the end of their shift to the Equipment and Logistics Specialist. The OIC or Shift Supervisor shall ensure all documentation is completed by the end of the officer's shift
- F. The Equipment and Logistics Specialist shall ensure copies of the Incident and Risk Management report are sent to UW Risk Management and UW Fleet as necessary to effect repairs to the vehicle and obtain reimbursement for the cost of such repairs.
- G. Supervisors shall report any traffic collisions involving department employees to the Professional Standards Lieutenant for tracking in the agency's personnel early warning system.

61.2.2 TRAFFIC COLLISION TYPES REQUIRING OFFICER RESPONSE

- A. One or more officers shall respond to the scene of a traffic collision involving any of the following:
 - 1. Death or injury.
 - 2. Hit and run. At least one officer should be dispatched to the scene, while other officers are checking the area for the offending vehicle.
 - 3. Impairment of an operator due to alcohol and/or drugs. At least two officers shall respond.
 - 4. Damage to public vehicles or property.
 - 5. Hazardous materials. The Madison Fire Department Hazardous Materials Unit should be dispatched if any release occurs.
 - 6. Disturbances between principles involved in the traffic collision. At least two officers shall respond.
 - 7. Major traffic congestion as a result of the collision. At least two officers shall respond initially, advising of further assistance as needed.
 - 8. Damage to vehicles to the extent towing is required.
 - 9. If two officers are not available for the above referenced points, mutual aid shall be requested in accordance with department directive 2.1 Jurisdiction and Mutual Aid.
- B. During a complex or serious traffic collision investigation, responding officers shall provide needed emergency medical attention if appropriate, request emergency medical services if needed, investigate the collision, record short-lived evidence, and restore normal traffic flow. It is the responsibility of the first responding officer to verify the report of the incident, request additional resources, if needed, and determine if the incident meets the criteria for activating the incident command system, and to begin the incident command system
- C. In cases where one of the involved drivers leaves the scene of the traffic collision and responds to the station or contacts the department to make a report, an officer shall be assigned to document information from the parties. The responding officer shall not decline to take a report based only on the involved vehicle or vehicles being moved.

61.2.3 TRAFFIC COLLISION SCENE RESPONSIBILITIES

- A. For traffic collisions involving property damage and/or injury, the primary officer shall take charge of the collision scene immediately upon arrival. When authorized emergency medical and/or fire services personnel respond, authority for the care of injured persons and fire suppression should be entrusted to them. In general, the assigned primary officer responding to the collision scene shall retain charge of the scene until completion of the operation; exceptions include arrival at the scene by supervisory personnel or when supervisory personnel re-assign responsibilities. Officers who

respond to assist at traffic collisions involving property damage and/or injury shall provide support as appropriate depending on the circumstances of the collision.

- B. For traffic collisions involving a fatality or a probable fatality, the first officer on scene should initiate the incident command system. The first responding supervisor may assume responsibilities of incident command.
- C. For officer involved traffic collisions, the officer involved shall exercise charge over the collision scene only until the arrival of the first responding officer, to whom the responsibility shall be transferred.
- D. In the event of a traffic collision, the on-duty law enforcement dispatcher should refer the following information to the responding officers: the location of the incident, the presence and severity of injuries, whether or not traffic is blocked, and other assigned units.
- E. As soon as possible upon encountering an unreported traffic collision, officers shall notify the communications center of the exact location, the presence and severity of injuries, whether or not traffic is blocked, and any other pertinent information.
- F. When approaching a traffic collision scene officers should be alert for and avoid destroying evidence. During the approach and upon arrival, officers shall be cognizant of any specific conditions or factors that may have contributed to the collision. These may include presence of view obstructions, inoperative or missing traffic control devices, or other hazards. Officers shall park their vehicles in such a manner as to provide an actual protection to the scene. Officers shall assess the scene to determine the need to summon assistance for emergency medical services, firefighting services, protection of the scene, traffic control, and additional investigative skills.
- G. If there is an injury at a traffic collision, officers should administer appropriate medical aid within their ability to the injured person. If there are multiple injuries, officers should identify those most seriously injured. Officers shall summon appropriate emergency medical assistance to the scene and assist in getting injured persons removed to the medical facility as soon as possible. Unless exigent circumstances exist, officers should not transport injured persons at a traffic collision in a police vehicle. At collision scenes where there is injury, actions to deal with the injury shall take precedence over investigative or reporting activities.
- H. If there is a potential for a fire at a traffic collision, officers shall take appropriate action to stabilize the conditions by providing adequate protection to the scene, isolating the immediate area, removing persons from the vicinity of the hazard if possible, suppressing the hazard if possible, and summoning the fire department for assistance. To the extent possible, officers shall attempt to eliminate the possibility of sparks or other ignition from smoking, flares, electricity, and any other source to a traffic collision. If a fire exists, officers should, if possible remove persons in the vicinity of the fire, extinguish the fire, and summon the fire department. Depending on the extent of the fire, officers shall evacuate the surrounding area and maintain isolation of the area until the fire is suppressed. Officers should carefully control the movement of vehicles in the vicinity of the fire or potential fire hazards, detouring traffic if necessary.
- I. Officers must be cognizant of the possibility that at any traffic collision involving a cargo vehicle, potentially hazardous material may exist. Officers must remain cautious and observant for any evidence or indications of hazardous materials before approaching cargo involved in collisions. When approaching the scene of a collision where there is a possibility of a hazardous material spill, officers should approach the area from an up-wind direction if possible. Upon arrival at the collision scene the officer shall attempt to make a preliminary identification of the hazardous material based on placards, vehicle type, containers, or information supplied by the operator of the vehicle. This preliminary investigation should be made from a safe distance. When there is a question whether spilled material at a collision scene is hazardous, an officer shall avoid contacting the material and keep others away from it. Officers should avoid inhaling fumes, smoke, or vapors. Both odorless and gas or vapors with odors may be harmful. The Emergency Response Guidebook published by the U.S. Department of Transportation should be referenced for the rapid identification of the shipping name of the hazardous material and concerning the nature of the hazard. The Emergency Response Guidebooks are available in each patrol squad and also in the communications center. The officer arriving at the scene of a collision involving a hazardous material shall immediately request response by the Madison Fire Department.
- J. In a property damage or minor injury traffic collision, the officer assigned to handle the report shall be responsible for interviewing or coordinating the interview of any involved parties or witnesses. In a serious or life-threatening or fatal traffic collision, the officer assigned to handle the initial report shall initiate or coordinate the initial interviews. Interviewing officers should question drivers and/or witnesses separately and should discourage drivers or witnesses

from discussing the collision with each other prior to any interview. Officers should interview drivers and witnesses as soon as possible after a traffic collision.

- K. Officers shall check the damage sustained by each vehicle involved in the collision. A thorough examination and evaluation of the damaged area may corroborate other evidence and statements as to how the collision occurred. However, the extent of the vehicle condition reporting depends on the seriousness of the collision and other extenuating factors. Items to be checked may include, but are not limited to: the tires for proper inflation or damage, the vehicle for proper outward visibility through all windows, the interior of the vehicle for loose material that may have interfered with the driver, the mirrors, and the lights on the vehicle. The officer should note which lights are on at the time of examination, which lights are broken, and the position of the light switches. The officer should never switch lights on to see if they work as this can destroy valuable evidence.
- L. At a traffic collision, officers shall note conditions of the road during the investigation at the scene for inclusion in the report. Officers should be alert for any foreign substance on the surface, note the condition of the surface, the clarity of the roadway, the grade, the width of the lane, and the condition of the roadway edge. Officers should check for individual obstructions and for the proper function of traffic control devices in the area. Officers shall record weather conditions existing at the time of the collision.
- M. All traffic collisions requiring completion of a DT4000 shall include a diagram. Standardized symbols shall be used when diagramming a traffic collision scene. In the case of a fatal or probable fatal traffic collision, a scaled diagram shall be made. Measurement shall be taken by the triangulation or coordinate method.
- N. When the investigating officer determines photographs are appropriate, they may photograph or coordinate the photographs of the scene. An evidence technician may also be requested, dependent upon the complexity of the traffic collision scene. The officer photographing the collision shall identify in the report the type of camera used and the photographs taken.
- O. The officer assigned to the collision investigation is responsible for the preservation and collection of any evidence. Officers shall make every attempt to preserve evidence in place until it can be properly recorded and recovered.
- P. Officers shall assist the drivers involved in the collision in exchanging information if necessary.
- Q. In the interest of protecting the scene and clearing the roadway, officers shall use their police vehicle lighting and other warning devices as necessary to alert approaching traffic to the potential danger. If the roadway is blocked by debris and/or vehicles and the need to preserve evidence no longer exists, the officer shall clear the roadway as soon as possible.
- R. The officer assigned to investigate the traffic collision should ensure that property belonging to the collision victims is protected from theft and is moved to a place of safekeeping if the owner is unable to care for it. Items of significant value and items readily accessible to theft should not be left with the vehicle.

61.2.4 TRAFFIC COLLISION INVESTIGATION FOLLOW-UP

- A. The Department shall perform follow-up traffic collision investigation services, if necessary. The Investigative Services Captain or designee may assign an investigator or refer the case to the primary investigating officer for follow-up.
- B. Supplemental reports shall be submitted and reviewed by a supervisor and, if charges are involved, the investigating officer shall forward the case to the District Attorney's Office for prosecution.
- C. At times, follow-up traffic collision investigations require special skills and technical assistance not available within the Department. The employment of outside technical assistance should be coordinated with approval from a supervisor.
- D. Traffic collision follow-up investigations may also require assistance from other agencies including but not limited to: the Wisconsin Department of Transportation, neighboring jurisdictions, or the Wisconsin State Patrol. The investigating officer(s) shall document their involvement in the investigation through supplemental reports.
